

## **Jibran Khan - Milestone 3 6/02/2012**

1)

Innovation week was spent mostly working on other courseworks, but in that time I would usually meet with members of the team everyday to offer my opinions about general A.I design as well as involving myself with helping with testing. I've spent my time integrating myself with the A.I team and now I am making some contributions to both it's design and code.

2)

- Created a report repository in wiki, I felt this would be a beneficial tool for people wanting to keep up to date with other members progress
- Started working directly on code and offering general design help with A.I team
- Offered an idea of turning on the spot when the ball is placed at certain angles to the robot in order to avoid collisions with the wall

3)

- At the moment I'm not too aware of how the A.I system works, better knowledge of it will help my contribution to the group
- I feel I should re familiarize myself with design of the robot, I've worked on the robot before and another team member being familiar with the design will no doubt be beneficial

4)

I feel I earned a 6.

I felt Michael Johnson made an exceptional effort deserving a 9. He has worked hard both the A.I and on the robot - building and fixing the kicker to be the strongest of all the teams I've seen so far.
